SAHI · CONCEPT PROPOSAL

Trade Discipline

Overtrading is still unsolved. This adds one thing on top of P&L Protect: a limit the trader sets before the week starts, and sees live while trading.

Already in SAHI

P&L Protect: stop, target, square-off

New here

Weekly risk cap + daily entry limit, set in advance

FLOW 1 · SUNDAY, BEFORE THE WEEK OPENS

Plan the week, calmly

Step 1

Weekly risk cap

“What’s your risk cap for the week?” One number, chosen with a clear head.

Step 2

Entries per day

How many fresh entries feel reasonable. Exits don’t count.

Step 3

Trading days

Which days you’re in. Skip the rest, no penalty.

Step 4

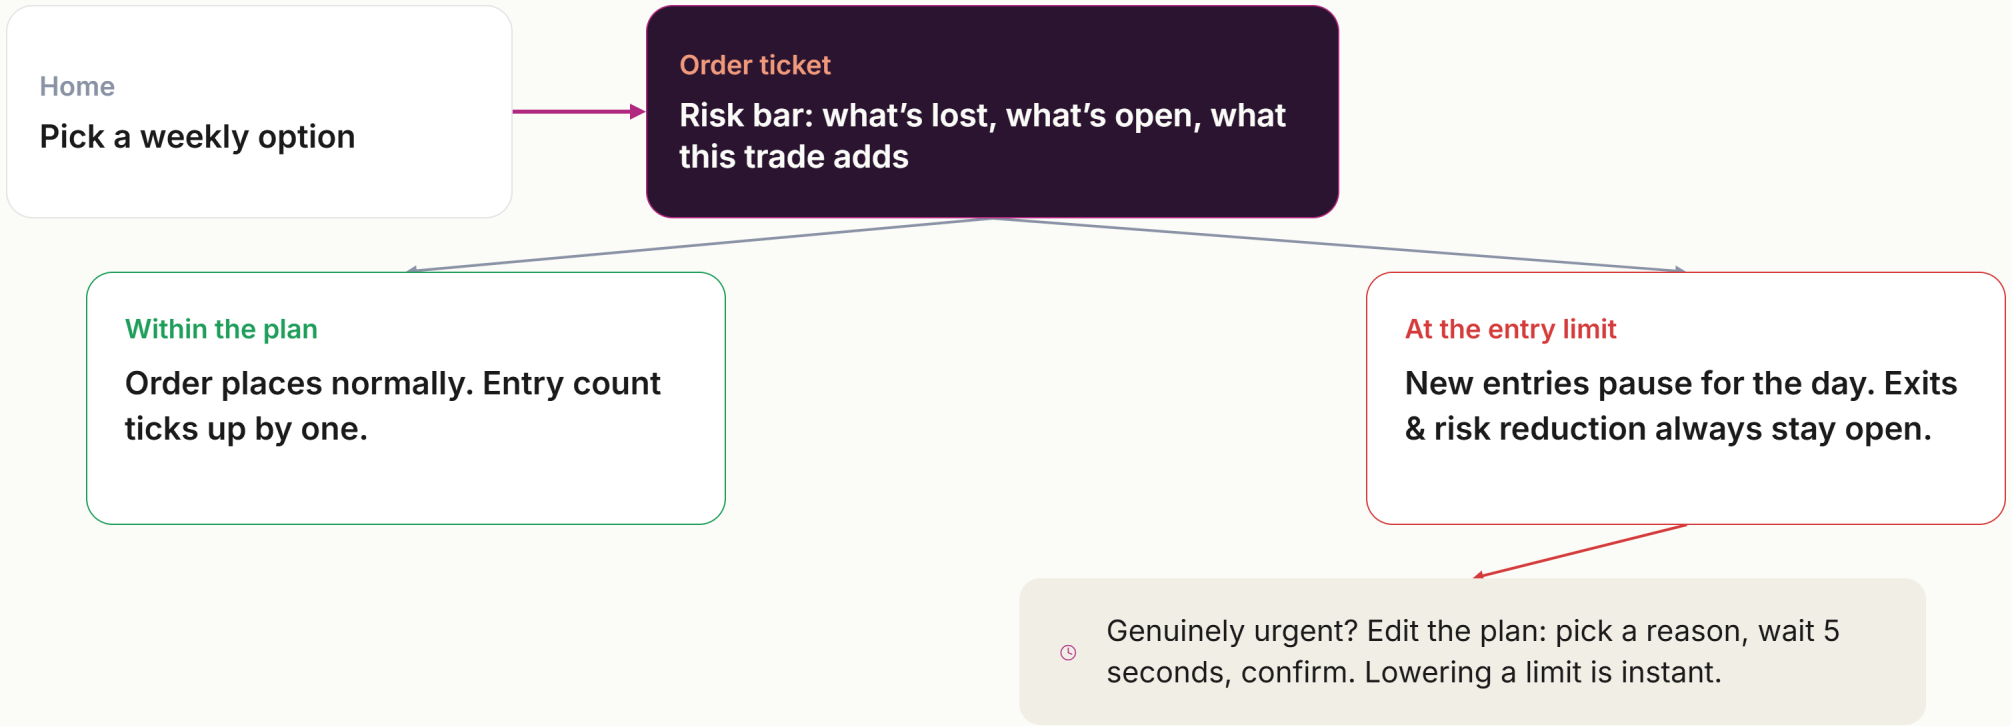

Review & lock in

Daily stop comes from P&L Protect. Not asked twice.

Three minutes, once a week. Not a daily chore.

FLOW 2 · MONDAY TO FRIDAY, IN THE TRADING APP

Hold to it, live

Nothing duplicated, one thing added

Already in SAHI	This proposal	Why it's new
Daily stop & target	Reused as-is, read once	Never asked twice
Square-off on trigger	Unchanged	No new enforcement engine
—	Weekly risk cap + daily entry limit	Doesn't exist today
—	Pre-trade risk preview	Visibility before the order, not after

My bet: traders who stay inside their own plan survive longer. I'd want to test that with real data, not claim it.
